Hello!

I am a highly motivated developer always trying to deliver my best in any given situation. I enjoy teamwork, playing golf, listening to music and creating exciting digital solutions and I am always hungry to learn more about, and become better at, the craft of programming. If You read this resume and believe that we can have a rewarding collaboration I am gladly looking forward to hearing from You :)

I have been working as a full-stack developer since I graduated from the Systems Science program at Gothenburg University, and have had the chance to try out different technologies and ways of working. I believe the world of software development is so exciting because there is always something new to learn and every colleague you meet has got something interesting to share. I want to work where there is an open and encouraging culture where new things can be tested and everyone feels welcome.

I like working as a full-stack developer because I want to see the whole picture and I want to think of the work I do as a complete solution that is handed over to the user of the product, but also because I am fascinated about technology in general and think that it is super exciting to do both front-end and back-end development. My strongest principles within software development that I follow in my daily work is:

- Simplicity.
- Add new dependencies with care.
- Write clear and clean.
- Write tests.

I truly enjoy working together as a team, solving problems and making robust, well-tested and performant software. I guess I am a typical developer in the sense that I really like to dig down into details and write as efficient and well-structured code as I can. But I really do feel that coding is teamwork and

that you should always discuss and look for a second opinion regarding your solutions. Both to make better results but also to learn.

Currently I am working in an agile team with a system that is built upon a containerized microservice architecture. I develop new features as well as maintain and green keep the existing codebase. The stack consists of .NET, Node.js, GraphQL and React.js.

Also I have a hobby-project that I have been working on during spare time that is available on the Swedish iOS App Store. In this app I am using an open API from Västtrafik, Gothenburg's public transport provider, to build an app that is – in my opinion – a very useful complement to the existing official app where you can subscribe and track your most commonly used stops and departures. It is written in Swift and also includes a home-screen widget and an Apple Watch version. Find the app by searching for “Nästa Resa” on the App Store.

Apart from software development I enjoy playing golf, following the Biathlon world cup, hanging out with my wife, son and friends, solving Escape Rooms, running, finance and stocks, eating good food and reading the news. I see myself as a diplomatic and easy going person who likes to have a good time as well as being serious about my work and I feel very strongly for the tasks that I am involved in.

If you have any questions don't hesitate to ask them. Looking forward to hearing from you!

Best regards,

Pontus Schuster Tengnäs

Experience

- *Full-stack developer, Stena Line, Gothenburg 2020 –*

Working on a microservice solution consisting of services in .NET and Node.js with a React.js front-end. Using Typescript over Javascript and gRPC as primary communication protocol. Other technologies used are GraphQL and Docker.

- *Consultant, Evry Sweden, Gothenburg 2017 – 2020*

Worked as a software developer consultant with a range of technologies and frameworks with a primary focus on front-end technologies but also backend development with Golang and .NET. Worked mostly with iOS, Android and Web development.

- *Consultant, Crepido AB, Mölndal 2016 – 2017*

Worked as a software developer with a primary focus on mobile development with .NET and C#. My work consisted of both front-end and back-end development.

- *Message Analyst, Enfo Zystems, Gothenburg 2015 – 2016*

Part-time job during my studies. Supported software integrations by addressing different types of errors and problems in messages and infrastructure.

- *Java-supervisor, Gothenburg University, Gothenburg 2014 – 2015*

Supervised and helped new students in Java-programming. Participated at specific occasions and explained concepts and principles within software development as well as answering to questions from the students.

- *Mailman, Posten Norge AS, Oslo 2011 – 2013*

Worked as a mailman in Norway. Also participated in a project where we developed a smartphone app for employees at Posten Norge. My role in the project consisted of bringing up ideas and creating use-cases as well as testing the app in real life-scenarios.

- *Mailman, Posten Meddelande AB, Halmstad 2010 – 2011*

Performed different types of tasks within the postal services.

Education

- Gothenburg University, Gothenburg – Degree of Bachelor of Science with a major in Informatics. 2016.

- Sannarpsgymnasiet, Halmstad – Societal studies. 2007 – 2010.

Merits

Nüsta Resa; Private project

<https://itunes.apple.com/se/app/n%C3%A4sta-resa/id1356267708?mt=8>

More apps that I have developed and worked on can be provided on request.

Technical merits

.NET, C#, Golang, Javascript, Typescript, React.js, iOS, Android, Docker, Xamarin, GraphQL, HTML, CSS, Microservice-architecture, Unit-testing, UI-testing, CI/CD, Swift, Node.js, SQL, MongoDB, REST, gRPC, Git.

Methodologies

Scrum, SAFe, Git flow, KanBan, Azure DevOps.

Languages

Swedish (native)

English (fluent, work-experience)

German (adequate, my wife is german)

Other merits

Swedish drivers license since 2009.

Credentials

Credentials and/or grades from Gothenburg University can be provided on request.
